Cloud-based email security that filters spam, viruses, phishing attacks and more.

Spam and malware are here to stay. Email-based threats to organizations and individuals continue to grow increasingly sophisticated as spammers innovate new tactics for evading spam and virus filtration systems. CloudFilter™ stops the junk and lets the good email through. Messages containing offensive, harmful, or policy violating content are held for user review, while good messages continue on their way.

Accurate filtering
Icon-based scoring indicators to clearly communicate various levels of safety.

Detailed analytics
Quickly see why an email was held and determine if the sender is trustworthy.
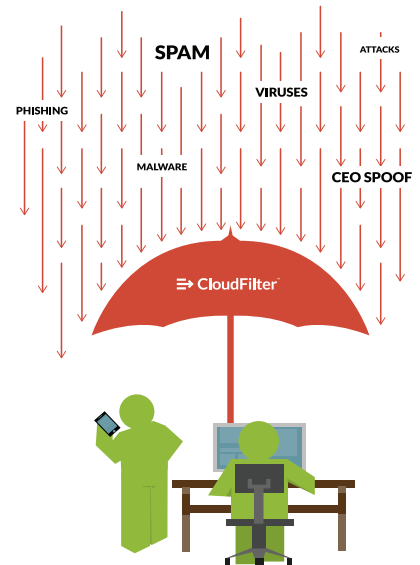

Powerful policy enforcement
Build and customize rules manually from templates, or through regular expressions.

A massive upgrade for Microsoft 365 security.
CloudFilter handles M365 email more intelligently so there are less false-positives. Users can preview held mail so important messages don't get buried. Plus, they can see clear message analytics and security details, so they're 100% sure it's safe to release to their inbox.

Only get the messages you want.
CloudFilter allows for granular control of the content and message quality that's either blocked or allowed for both individual users and larger groups as well. Users can also add an address to their list of allowed or blocked senders from th message preview ion one simple step. CloudFilter helps ensure that everyone receives only the email they want in their inbox.
